

p2p group chat

chat with friends

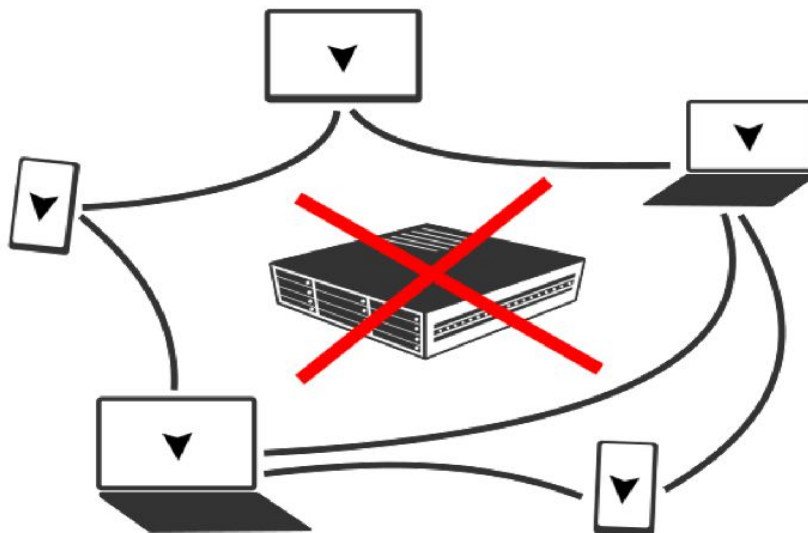

without a server

online or offline

without asking permission

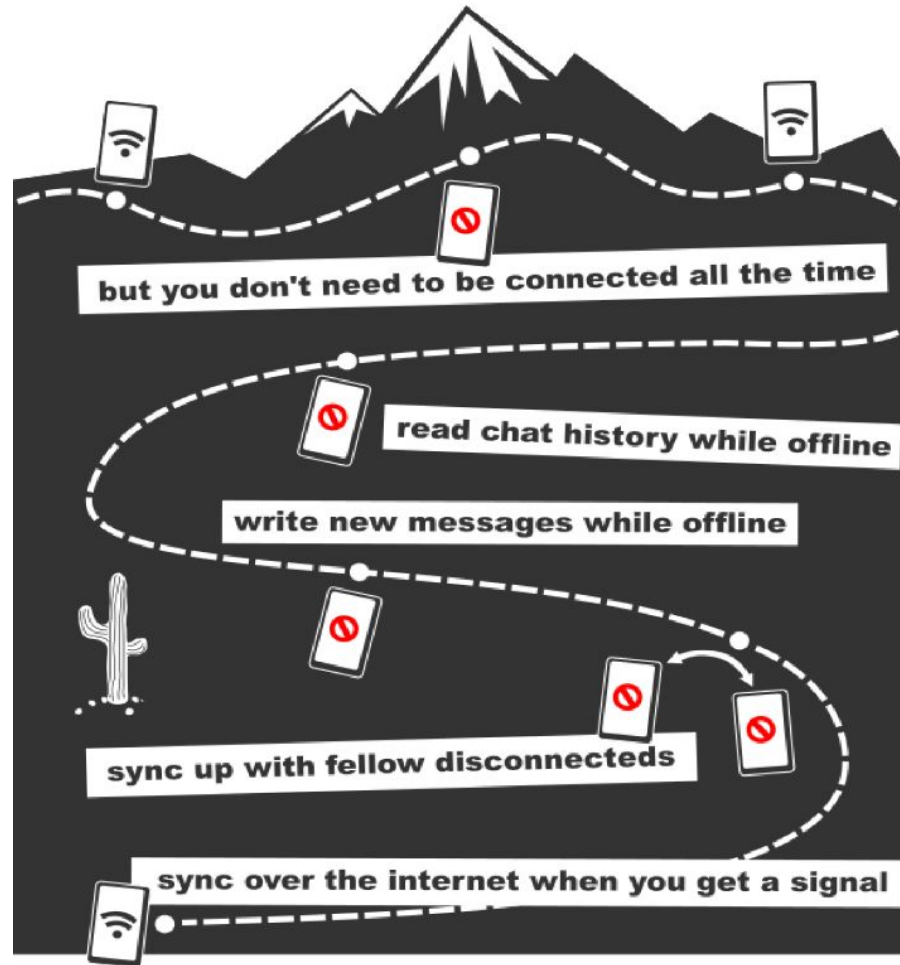

<https://cabal.chat>

a cabal is a swarm of connected devices

**devices connect directly to each other,
not to a server**

p2p!

anyone can create a cabal

cabal:// urls are secret

anyone with the cabal:// url can join

**each cabal has many channels
for different topics**

#gardening

#zines

#offgrid

#sewing

#diy

anyone can create a channel

cabal's moderation is subjective

everyone can:

block anyone

hide posts from anyone

**subscribe to anyone's public
moderation actions**

**you are always an admin,
from your perspective.**

you can share cabal:// links with moderators set

**cabal://1eef9ad64e284691b7c6f6310e39204b5f92765e36102046caaa6a7ff8c02d74
?admin=56a6b5e6f5e3fa70ab46daaedfdb6d694422bf1f156260f8cf0ddf206d8a328**

**so that friends you invite will have a positive
and moderated initial experience**

**cabal is designed for
longevity**

outlast a server crash

...there are no servers

**outlast the initial crew
who set things up**

**online spaces that
can't be owned**

there are many cabal clients

(programs you run to join a cabal)

cabal-cli
(command line)

cabal-desktop

coming soon

cabal-web*

coming soon

cabal-mobile*
